HIRAM GALINDO JOSE JUNIOR

Full-Stack Developer

Ituverava, SP, Brazil | Open to Remote (EU / US time zones) and Relocation
hiramgalindojr11@gmail.com | +55 16 99247-3333 | linkedin.com/in/hiram-galindo-jr-b0bb33330 | github.com/HiramJr001

SUMMARY

Full-stack developer who ships production software solo, end to end. Built and deployed an internal operations suite now used daily by an accounting firm, cutting recurring payroll and HR task time by roughly 80%. Comfortable across JavaScript/TypeScript, React, Node.js and Python, with a self-developed design sense spanning backend architecture through UI and brand identity. Fluent English (C1).

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL, HTML5, CSS3

Frontend: React, React Native, Tailwind CSS, Vite, responsive UI, accessibility-minded markup

Backend & Data: Node.js, Flask, REST APIs, MySQL, Supabase (PostgreSQL), SQLite, data modeling

Tools & Practices: Git, GitHub, pytest, Electron, PyInstaller, OCR pipelines (Tesseract, PyMuPDF), AI / LLM API integration, multiprocessing, checkpointing and retry logic

Design: UI/UX design, design systems, visual identity and branding

PROFESSIONAL EXPERIENCE

Internal Tools Developer / Office Assistant *10/2024 – Present*

Inovare Contabilidade — Ituverava, SP, Brazil

- Designed, built and shipped a suite of internal productivity applications used daily across the firm, cutting recurring payroll and HR task time by roughly 80%.
- Engineered an AI-powered document-extraction pipeline that parses pay stubs, invoices and admission forms into structured Excel output; processed a batch of 140 employee admission documents in a fraction of the manual entry time.
- Built the company's first website end to end, establishing an online presence that doubled combined site and Instagram engagement.
- Rebuilt the company's visual identity — logo, brand system and social design language — doubling profile views and inbound client inquiries.
- Own all internal IT: hardware and software troubleshooting, network and printer maintenance, and technical support for the entire office.

Stack: Python, JavaScript, TypeScript, React, Node.js, MySQL, Tailwind CSS, Vite

PROJECTS

BackOffice OS — Internal Operations Suite *2025 – Present*

github.com/HiramJr001/backoffice-os — solo build, in daily production use

- Document Guardian engine: locates expiry dates across a network share of 80,000+ client documents using a four-level cascading filter (folder pruning, filename ranking, native PDF text, OCR fallback), so expensive OCR runs on a small fraction of files instead of all of them.
- Made the scan resumable: each company is committed to a SQLite checkpoint across CPU-1 worker processes, so a dropped network share, reboot or manual stop resumes instead of restarting a multi-hour job.
- Built confidence-scored extraction that routes low-evidence documents to manual review instead of guessing a date, with a parser written for real OCR noise — broken spacing, missing accents, "valid for N months" plus issue date.
- Shipped it as a single Windows installer (electron-builder, PyInstaller, embedded Tesseract): the end user installs one .exe with no runtime setup. Document categories are declarative profiles, so adding a type needs no engine change.

Stack: Python, PyMuPDF, Tesseract OCR, SQLite, Flask, openpyxl, JavaScript, Electron, PyInstaller

NFS-e Invoice Downloader *2026*

- Desktop tool for bulk invoice retrieval from Brazil's national tax API across dozens of client companies in parallel, with per-entity checkpointing, retry logic on transient failures, and mTLS certificate authentication.

Stack: Python, Tkinter, ThreadPoolExecutor, mTLS / PFX authentication

Arquivo — Document Management App *2025*

- React and TypeScript application backed by Supabase; led a full architectural refactor into custom hooks, shared types and modular components, cutting duplicated logic and making the codebase maintainable long term.

Stack: React, TypeScript, Vite, Supabase (PostgreSQL)

EDUCATION

B.Sc. in Systems Analysis and Development *Completed 2025*

Unifran — Universidade de Franca, Brazil

Coursework: Data Structures, Database Systems, Object-Oriented Programming, Software Engineering, Web and Mobile Development, Cloud Computing, Parallel and Distributed Computing.

LANGUAGES

Portuguese — Native | English — C1 Advanced, fluent spoken and written
